JOURNAL POLICIES AND AUTHOR INFORMATION

AIMS AND SCOPE

TMTD is an English-language, multidisciplinary medical journal publishing scholarly work across clinical medicine, surgical specialties, nursing, allied health, public health, epidemiology, medical education and related biomedical disciplines. Its purpose is to disseminate scientifically sound, clinically relevant research and encourage collaboration across specialties. The journal considers original research, reviews, systematic reviews, methodological articles, brief communications, and letters to the editor. Manuscripts must offer clear scholarly relevance, appropriate methodology and transparent reporting.

PUBLICATION SCHEDULE

The journal publishes six issues annually, in January, March, May, July, September and November. The inaugural issue is scheduled for 30 November 2026. Subsequent issues follow the regular bimonthly cycle.

OPEN ACCESS POLICY

TMTD is intended to provide immediate free online access to published articles to support the broad dissemination of scientific knowledge. Readers may access and read journal content without a subscription. Specific reuse permissions, copyright ownership and the applicable Creative Commons license must be stated in each published article and approved by the publisher before publication. Open access does not itself authorize unrestricted commercial reuse.

EDITORIAL AND PEER REVIEW POLICY

Submissions undergo an initial editorial screening for scope, originality, scientific integrity, reporting quality and completeness. Suitable research manuscripts are referred to independent subject specialists for peer review. Editors evaluate reviewer reports and make decisions on acceptance, revision or rejection. Editors and reviewers must declare conflicts of interest and recuse themselves where impartiality may be compromised. Editorial decisions must remain independent of commercial interests.

PUBLICATION ETHICS

Authors are expected to follow applicable ethical principles and the recommendations of the International Committee of Medical Journal Editors (ICMJE) and Committee on Publication Ethics (COPE). Studies involving human participants must report ethics committee approval or an appropriate exemption, and informed consent where required. Clinical trials should include prospective registration when applicable. Plagiarism, redundant publication, data fabrication, falsification and inappropriate authorship are not acceptable.

RESEARCH REPORTING AND STATISTICS

Authors should use established reporting guidance appropriate to study design, including CONSORT for randomized trials, STROBE for observational studies, PRISMA for systematic reviews and CARE for case reports where relevant. Statistical methods, software, sample size, missing data and uncertainty estimates should be reported transparently. Statistical review may be requested for manuscripts requiring specialized evaluation.

AUTHORSHIP, FUNDING AND CONFLICTS OF INTEREST

All listed authors must meet recognized authorship criteria, approve the submitted manuscript and accept responsibility for its content. Authors must disclose funding sources, relevant financial or non-financial conflicts of interest, and contributions. Acknowledgments should identify contributors who do not qualify for authorship.

AI-ASSISTED TOOLS

Generative AI tools cannot be listed as authors. Authors remain accountable for the accuracy, originality, citations and integrity of all manuscript content. Substantive use of AI-assisted tools in writing, image production, data processing or analysis should be transparently declared, specifying the tool and its role. Confidential manuscripts and personal data must not be uploaded to unauthorized external services.

CORRECTIONS, RETRACTIONS AND APPEALS

Concerns raised after publication should be investigated fairly and documented. When warranted, the journal may publish corrections, expressions of concern or retractions following established publication-ethics guidance. Authors may submit reasoned appeals of editorial decisions, which should be considered independently where practicable.

JOURNAL POLICIES AND AUTHOR INFORMATION

AUTHOR SELF-ARCHIVING AND DIGITAL PRESERVATION DISCLAIMER

Authors may share links to the published version and reuse citation metadata with appropriate attribution. Deposit of accepted or published manuscripts in repositories is governed by the final article license and publisher agreement. Long-term preservation arrangements and any external archival service will be announced only after a formal arrangement is established.

PRIVACY AND DATA PROTECTION

Personal information provided to the journal is used for editorial, peer-review and publication administration, subject to applicable data-protection requirements. Personal contact details should not be disclosed to unrelated parties without a lawful basis. Authors must protect confidential participant and patient information and obtain consent for identifiable materials where required.

PERMISSIONS AND COPYRIGHT

Authors must obtain permission for copyrighted material where permission is required and acknowledge sources of reproduced figures, tables and substantial excerpts. The rights statement and license accompanying each article govern reproduction, redistribution, adaptation and commercial use.

ADVERTISING AND EDITORIAL INDEPENDENCE

Any advertising or sponsorship must be clearly distinguished from peer-reviewed content and must not influence manuscript selection, review, editorial conclusions or publication decisions. Claims in advertisements must comply with applicable legal and ethical requirements.

MANUSCRIPT PREPARATION

Manuscripts should be written in clear academic English. Original research should include a structured abstract and sections covering Introduction, Methods, Results and Discussion. References should follow Vancouver numbering in order of citation. Tables and figures must be numbered, titled, cited in the text and accompanied by appropriate legends. Letters to the editor may be submitted without a structured abstract. All submissions should include author affiliations, corresponding-author details, declarations and any required ethical documentation.

Statements, findings and opinions in published articles are those of the respective authors. Publication does not imply endorsement by the editors, editorial board or publisher. Authors are responsible for the scientific accuracy and integrity of their work.
